$$I = h\left(\frac{f(x_0)+f(x_{m+1})}{2} + \sum_{i=1}^{m+1} f(x_i)\right)$$

$m=1,\ h=20$:

$f(x) = I_{exact}(-10) = P(-10)\cdot\cos(-20) \approx -38106,7$

$f(10) = P(10)\cdot\cos(20) \approx 38392,4$

$I_1 = 20\cdot\frac{38392,4}{2} \approx 2856,6$

$\Delta I_1 = |I_1 - I_{exact}| = 2524,4$

$m=2,\ h=10$:

$f(0) = P(0)\cos(0) = 0$

$I_2 = 10\left(\frac{38392,4}{2} + 0\right) \approx 14283$

$\Delta I_2 = 1096,1$

$m=4,\ h=5$:

$f(-5) = -2227,5\cdot\cos(-10) \approx 1869,03$

$f(5) \approx -29159$

$I_4 = 5\left(\frac{f(-10)+f(10)}{2} + f(0) + f(-5) + f(5)\right) \approx -29,09$

$\Delta I_4 = 3533$
